EDUCATION

AASTU

Environmental Engineering
2023 to 2028

SKILLS

Programming

Python, JavaScript, SQL, HTML, CSS

AI & Machine Learning

TensorFlow, Scikit Learn, NumPy, Pandas,
Matplotlib, NLP, Computer Vision, LLM
orchestration, RAG with FAISS, Dialogflow

Web & Mobile

React, React Native (Expo), FastAPI, Flask, REST
APIs

Data & Infrastructure

PostgreSQL, MySQL, SQLite, Redis, Docker,
Cloudflare R2, Git, GitHub, Vercel, Netlify, Hugging
Face

Other

Data cleaning, data visualization, model
optimization

CERTIFICATIONS

AI Literacy
IBM SkillsBuild
Data Literacy
IBM SkillsBuild
Machine Learning Internship Certificate
Talrn
Machine Learning Training Program
Addis Ababa Science and Technology University

CONTINUING EDUCATION

Advanced LLM engineering
AI agent architectures
LLM fine tuning
Cloud deployment on AWS and GCP
Scalable AI infrastructure

PROFILE

Self taught full stack AI engineer with hands on experience in Python, TensorFlow, Scikit Learn, and full stack web and mobile development. I specialize in building AI powered applications, scalable backend APIs, and LLM powered systems, from concept to deployment. My work spans machine learning, computer vision, conversational AI, and retrieval augmented generation (RAG), and I have gained industry experience through a remote machine learning internship contributing to a production AI platform. I am skilled at building predictive models, data visualization, and production ready APIs, and I am passionate about translating raw data into actionable insights and building software that solves real problems for users in Ethiopia and beyond.

EDUCATION

Addis Ababa Science and Technology University (AASTU)

Environmental Engineering
2023 to 2028

EXPERIENCE

Machine Learning Intern

Nov 2025 to May 2026

Talrn (Remote)

- Contributed to the development of a next generation AI powered digital media platform used in production, including multi LLM orchestration and automated media workflows.
- Built backend APIs and services using Flask, and frontend components using React and TypeScript.
- Integrated LLM powered automation for automated news aggregation and AI assisted article generation.
- Worked across the platform's content pipeline, from data ingestion to published output.
- Collaborated remotely with a distributed team using Git based development workflows.

PROJECTS

Tena AI, AI Health Intelligence Assistant (In Development)

React Native (Expo), FastAPI, PostgreSQL, SQLite, Redis, Groq API, Llama 3, FAISS, Cloudflare R2

AI powered diabetes management platform for Ethiopian patients, centered on a personalized LLM chatbot with retrieval augmented generation. Features glucose monitoring, medication tracking, symptom logging, PDF health reports, multilingual (Amharic and English) support, push notifications, and AI generated health insights.

github.com/Ake544/tena_ai

Gursha, Conversational Food Ordering Platform

FastAPI, MySQL, Dialogflow, JavaScript, HTML, CSS

Full stack food ordering platform built around an NLP powered chatbot for conversational ordering. Includes Google OAuth and JWT authentication, order management, a recipe explorer, an analytics dashboard, and a complete payment workflow.

Live: gursha-food-delivery.vercel.app | Code: github.com/Ake544/gursha-food-delivery

EcoScan, AI Waste Classification System

TensorFlow, FastAPI, EfficientNet, Tailwind CSS, JavaScript

Computer vision application that classifies waste materials using transfer learning and provides recycling recommendations, reaching roughly 80 percent classification accuracy.

Live: eco-scan-seven.vercel.app | Code: github.com/Ake544/EcoScan

House Price Prediction

Python, Scikit Learn, Flask, HTML, CSS, JavaScript

Machine learning web application that predicts property prices using regression models trained on real estate data, reaching roughly 85 percent accuracy, deployed with an interactive frontend.
